**CONTENTS OF VOLUME 34**

---

**NUMBER 1****PHYSICS OF INSTRUMENT MAKING**

- Methodology for the study of internal friction in the mode of free damped oscillatory process.  
Part 2. Theoretical analysis of experimental results  
*V. A. Lomovskoy, Y. V. Chugunov, S. A. Shatokhina* 3
- Investigation of an experimental interference installation with spatial microscanning to control the geometric parameters of the surface  
*E. E. Maiorov, V. V. Kurlov, Y. M. Borodyansky, A. V. Dagaev, I. S. Tayurskaya* 19
- Kinetics of conductivity of n-type semiconductor metal oxide films during chemisorption of oxidizing gases (short message)  
*S. A. Kazakov, M. A. Grevtsev, I. E. Jagatspanyan, A. O. Volchek* 26
- Application of a directional interferogram recording scheme to determine the movement of an object using a holographic interference installation  
*E. E. Maiorov, G. A. Kostin, T. A. Chernyak, N. E. Baranov* 30
- Non-contact method for measuring the dependence of the critical current of a high-temperature superconductor tape on the magnitude and orientation of the magnetic field  
*D. S. Chikurov, A. E. Rudominskiy, M. P. Volkov* 37

**INSTRUMENT MAKING OF PHYSICAL AND CHEMICAL BIOLOGY**

- Production of activated carbon from biomass as electrode material for electrochemical devices (review)  
*T. E. Kuleshova* 43
- A percolation lab-scale bioreactor system LB-1 for cultivation of microorganisms sensitive to mechanical damages  
*T. S. Tikhomirova, Y. A. Lepekhin, M. S. Taraskevich* 62
- Collecting genetic biomaterial (DNA) from surfaces: methods and devices (review)  
*D. G. Petrov, E. D. Makarova, I. E. Antifeev, M. V. Zaitseva* 81

**MATHEMATICAL METHODS AND MODELLING  
IN INSTRUMENT MAKING**

- Analytical potentials of electric fields for simulation of ion guides with a periodic structure  
*A. S. Berdnikov, S. V. Masyukevich* 107
- About the method of calculating the light intensity in electronic optics  
*S. I. Shevchenko* 117

**NUMBER 2****MATHEMATICAL METHODS AND MODELLING  
IN INSTRUMENT MAKING**

- Hamiltonian equations of motion as applied to charged particle optics  
*A. S. Berdnikov, S. V. Masyukevich, Yu. I. Khasin, M. I. Yavor* 3
- PHYSICS OF INSTRUMENT MAKING**
- Methodology for the study of internal friction in the mode of free damped oscillatory process. Part 3. Internal friction mechanisms  
*V. A. Lomovskoy, Y. V. Chugunov, S. A. Shatokhina* 17

|                                                                                                                                                                                                                                        |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Double spherical electric field strength sensors with supplied, composite and separate sensitive elements and their comparative analysis<br><i>S. V. Biryukov</i>                                                                      | 30 |
| Studying the phenomenon of contamination on small spacecraft<br><i>D. V. Fomin, I. O. Sholygin, E. I. Zubko</i>                                                                                                                        | 44 |
| Kinetics of conductivity of n-type semiconductor metal oxide films during chemisorption of reducing gases (short message)<br><i>S. A. Kazakov, M. A. Grevtsev, I. E. Jagatspanyan, A. O. Volchek</i>                                   | 54 |
| Disperse ferromagnetic: a control of magnetic properties of sample and its material (quasicontinuous). Criterion of sample' relative length<br><i>D. A. Sandulyak, I. A. Solovlev, V. A. Ershova, A. V. Sandulyak, A. A. Sandulyak</i> | 58 |
| The nonlinear acoustics application for the increasing of sonar's efficiency on shelf<br><i>E. V. Voloshchenko</i>                                                                                                                     | 67 |

### DEVELOPMENT OF MEASURING DEVICES AND SYSTEMS

|                                                                                                                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Microfluidic device for analysis of red blood cells of laboratory animals<br><i>N. A. Levdarovich, Yu. S. Grechanaya, A. S. Ivanov, M. O. Gryaznova, E. A. Skverchinskaya, I. V. Mindukshev, A. S. Bukatin</i> | 77  |
| The method of combining the main and backup sets of space experiment control equipment<br><i>D. V. Lisin</i>                                                                                                   | 95  |
| The multi-component pump signal's parametric transmitting antenna for shallow water hydroacoustic monitoring<br><i>E. V. Voloshchenko</i>                                                                      | 102 |

### INFORMATICS, COMPUTER TECHNICS AND CONTROL

|                                                                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Analysis of the properties of ultra-wideband signals affecting the secrecy and reliability of data transmission in radio communication systems<br><i>A. A. Gavrishev, D. L. Osipov</i> | 112 |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

## NUMBER 3

### SYSTEM ANALYSIS OF MEASURING DEVICES AND METHODS

|                                                                                                                                                                   |    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| Microvalves in microfluidic devices. Part 2. Passive microvalves (review)<br><i>G. E. Rudnitskaya, A. N. Zubik, A. A. Evstrapov</i>                               | 3  |
| Features and results of using parametric profilograph in underwater archeology<br><i>A. P. Voloshchenko, P. P. Pivnev</i>                                         | 28 |
| Prospects for the application of hydroacoustic systems using parametric radiation mode to measure sea wave characteristics<br><i>E. V. Voloshchenko</i>           | 37 |
| Application of devices for relaying signals during hydroacoustic measurements<br><i>D. A. Kosteev, A. K. Britenkov, N. E. Zemnyukov, A. V. L'vov, M. B. Salin</i> | 54 |
| Investigation of the influence of the peak factor of input signals on some characteristics of the ADC<br><i>A. A. Gavrishev, D. L. Osipov</i>                     | 64 |

### MATHEMATICAL METHODS AND MODELLING IN INSTRUMENT MAKING

|                                                                                                                                                         |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| System of equations for modeling electroosmotic emitter in the approximation of viscous incompressible heat-conducting fluid<br><i>B. P. Sharfarets</i> | 70 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|----|

The effectiveness of a jet disruptor to prevent the non-evaporated droplets from passing through the inlet interface of the mass spectrometer

*I. V. Kurnin*

79

## DEVELOPMENT OF MEASURING DEVICES AND SYSTEMS

A constructive solution for a dual spherical electric field strength detector with biangular sensitive elements

*S. V. Biryukov*

87

Development and investigation of hydroacoustic antennas with electrohydraulic impact

*E. A. Krasiukov, T. G. Demyanov, V. V. Petrosyants*

98

Updating the research infrastructure of scientific institutions during the implementation of the first stage of the national project "Science and Universities"

*E. V. Lutschekina*

106

## NUMBER 4

*Thematic issue: "In memory of Professor Lydia Nikolaevna Gall"*

### SCIENTIFIC ARTICLES ON MEMORY L.N. GALL

Langmuir monolayers — a new type of sorbents for metal-affinity chromatography

*N. G. Sukhodolov, A. A. Selyutin, E. P. Podolskaya*

3

Microdispersed electrospray mode in negative mode as a method for sample application on LDI targets

*S. K. Ilushonok, M. Z. Muradymov, M. B. Zhukov, S. I. Stolonogova,*

*K. A. Roze, A. N. Arsenyev, E. P. Podolskaya*

16

Possibilities of instrumental study of the structure of biological colloidal systems

*G. M. Cherniakov, S. V. Kostylev*

23

Electrochemical detection of single DNA molecules with a solid-state nanopore

*P. K. Afonicheva, N. V. Vaulin, D. V. Lebedev, A. S. Bukatin, D. A. Kirilenko,*

*A. N. Ableev, Yu. D. Ivanov, I. S. Mukhin, A. A. Evstrapov*

34

Development of a device for setting up and checking optical system of genetic analyzer for massive parallel sequencing

*E. K. Vasil'eva, I. V. Chubinskiy-Nadezhdin, V. E. Kurochkin,*

*Y. I. Alekseev, Yu. V. Kulikov*

43

High-resolution L-dielcometry — an effective method for studying aqueous solutions and biological systems

*I. R. Gall, N. R. Gall*

50

Estimation of the probability of erroneous interpretation of the results of PCR analysis.

Part 2. Methodology for accounting for human factor errors

*A. L. Bulyanitsa*

60

Prospects for the development of high-temperature mass spectrometry for study inorganic materials (*abstract*)

*V. L. Stolyarova, A. L. Shilov*

68

### PORTRAIT OF A SCIENTIST IN MEMORY

Memory of colleagues, friends, employees

69

### MISCELLANEOUS

Measurement of motion parameters of agitated interface using effects nonlinear acoustics for coastal segment common marine monitoring system

*E. V. Voloshchenko*

77

Experience in design of instrumentation for scientific research on energy ecology and horticulture

*S. A. Rakutko, E. N. Rakutko*

90

Evaluation of the properties of a sequence of random numbers obtained on the basis of quantum processes using nonlinear dynamics methods

*A. A. Gavrishev*
